Flex & Flex M

ONBOARD PREAMP SYSTEMS

Style, elegance and an intuitive design are the hallmarks of Fishman's knob-based Flex Series.

Flex Series:

Featuring a small and unobtrusive footprint, Flex models are offered with a range of available features from the basic volume and tone controls to the technologically advanced tuner and blend control models.

Highly detailed and stylized knobs have been designed with ergonomics and elegance in mind, offering precision performance and a smooth luxe feel.

Flex M Series:

Fishman's Flex M Series presents all of the design and ergonomics of the Flex Series but adds a more refined look with faux-tortoise knob inserts and the performance of our flagship Acoustic Matrix® undersaddle pickup.

All models include an internal battery bag and 1/4" output jack to complete the Flex M's discreet design.

Flex M models will provide your guitars with Fishman-quality in a sophisticated and desirable format.

PowerTap Infinity

UNDERSADDLE PICKUP SYSTEMS

A new world of percussive performance elements and tactile dynamics for guitarists of all styles!

The PowerTap Infinity system combines the superior performance and tone of our Matrix Infinity undersaddle pickup system, with a soundboard body sensor. With the addition of Tap pickup technology, players can add new performance dynamics of Touch, Ambience and Percussion.

The easily adjustable Blend control mixes the Rare Earth and Tap signals in mono, or run both signals into separate channels using a stereo cable. This feature allows players to add separate effects, level control, and EQ to each pickup independently – to create a striking soundscape of tones from a single instrument.

A sealed enclosure for the soundhole-mounted Volume and Tone control module allows players to effortlessly make adjustments to their sound.

The preamp's voicing switch easily accessible so players can accommodate different types of guitars, amplification choices, playing styles and performance situations.

PowerTap Infinity features:

- The Fishman Tap body sensing pickup captures percussive elements and natural dynamics without the risk of feedback
- The world's best-selling undersaddle pickup, the Acoustic Matrix®

FISHMAN AURA®
PREAMPS GO BEYOND
MODELING TO CREATE
**A SPACIOUS SOUND
THAT IS BOTH VIVID
AND NATURAL.**

AURA®

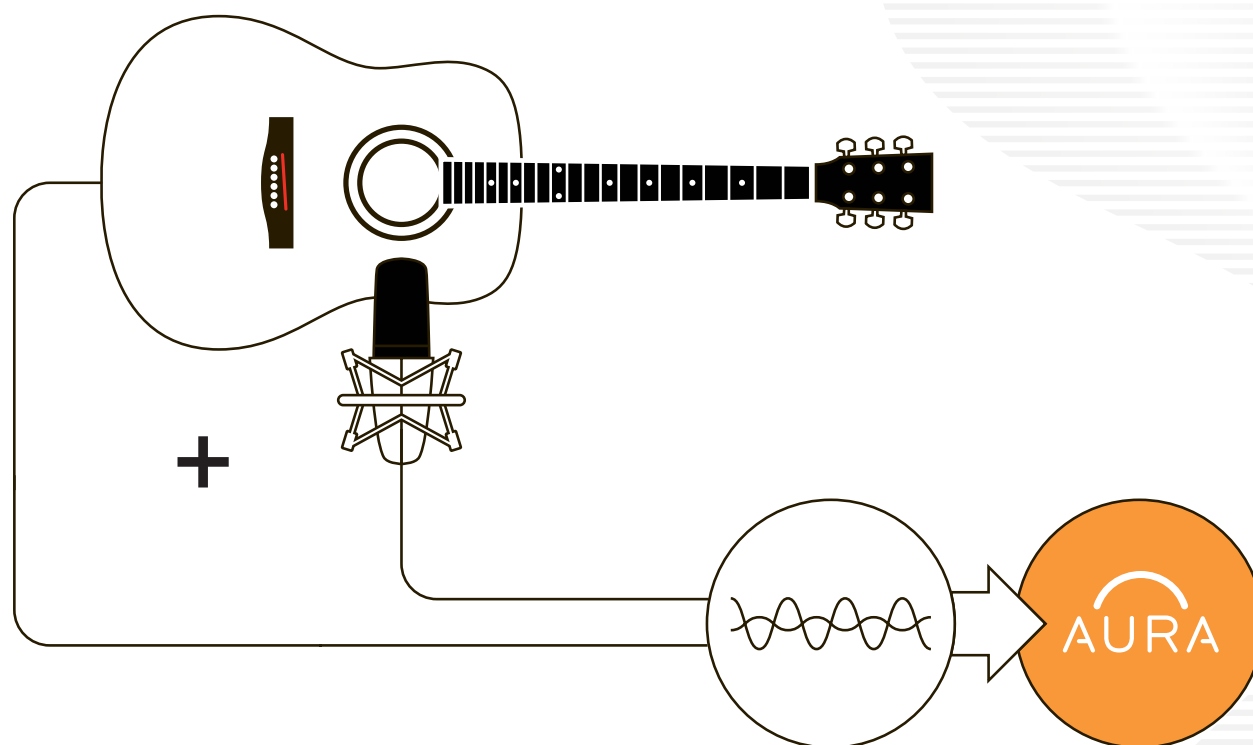

Aura

ACOUSTIC IMAGING TECHNOLOGY

Fishman Aura® preamps and onboard imaging systems go beyond modeling to create a spacious sound that is both vivid and natural.

The sound of your acoustic instrument in a room is a combination of time, space and distance. That's why no matter how great your undersaddle pickup or soundhole microphone sounds – and they can sound fantastic – there is still something missing: the instrument's aura. To recreate the sound that naturally surrounds your instrument in a room through an amplifier or PA, we created Aura Imaging Technology.

Using a selection of the most coveted microphones and our Aura algorithms, we developed a library of "Images" that when blended with the pickup sound on your guitar, create a dramatic, natural sound. All Aura products come loaded with a selection of Images.

Aura Acoustic Images are custom made by recording your make & model guitar with an undersaddle pickup and professional microphones in Fishman's studio.

Onboard Aura Systems allow users to select and play through these pre-loaded Images. The result is the most natural, life-like, plugged-in acoustic tone available.

Aura Pro

ONBOARD PREAMP SYSTEMS

Fishman’s Aura® Acoustic Imaging Technology allows acoustic musicians to easily and accurately reproduce the sound of their instrument as miked in a professional studio.

This state-of-the-art onboard preamp system offers the excitement of Fishman’s patented Aura® Acoustic Imaging technology in a smaller footprint.

Four Aura Images are custom made with your specific model of guitar and then loaded and locked into this easy-to-use preamp. Featuring a built-in tuner, feedback-fighting phase control and fully-programmable digital equalization, the Aura Pro offers the best and most accessible onboard control and sound quality available for acoustic-electric guitars. System comes complete with a Switchjack Stereo Endpin Jack and an Acoustic Matrix® Undersaddle Pickup available in wide, narrow and split formats.

PowerTap Earth

SOUNDHOLE PICKUP WITH BODY SENSOR

A new world of percussive performance elements and tactile dynamics for guitarists of all styles.

As part of the Fishman Acoustic PowerTap™ series, the PowerTap Earth pickup system combines the easy installation, superior performance, and warm, transparent sound of our Rare Earth Humbucker, with a totally new soundboard body sensor.

With the addition of Tap pickup technology, players can add new performance dynamics of Touch, Ambience and Percussion.

The easily adjustable Blend control mixes the Rare Earth and Tap signals in mono, or run both signals into separate channels using a stereo cable. This feature allows players to add separate effects, level control, and EQ to each pickup independently – to create a striking soundscape of tones from a single instrument.

PowerTap Earth features:

- The Fishman Tap body sensing pickup captures percussive elements and natural dynamics without the risk of feedback
- Warm and full humbucking sound from the Rare Earth soundhole pickup
- Tap pickup Blend control module is discreetly mounted on soundhole pickup
- Active electronics and neodymium magnet structure for exceptional string balance and clarity
- Stereo/mono output capability built in (option is easily and automatically determined by cable choice)
- Miniature batteries (included) offer long life

Fishman Fluence Modern Humbucker series with an optimized single coil voice added to the popular Voice 1 and Voice 2 sounds. This third voice extends the sonic possibilities of Fluence Modern Humbuckers, allowing players to cover an even broader range of tones with an ideal split-coil sound.

6-String Modern Humbucker Alnico

All the musicality, power, and explosiveness of alnico. Full chords and fluid solos, plus a voice you've never heard in a humbucker. Great in both positions, or commonly paired with a ceramic bridge pickup.

Voice 1 (Modern Active High Output): The ideal active alnico sound. Full, round, and boosted, but with unprecedented articulation and dynamics.

Voice 2 (Crisp, clean and fluid): The clean, crisp neck humbucker tone you've always wanted without the thin, plinky sound you don't.

Voice 3: (Single Coil): Glassy, crystal-clear tone.

6-String Modern Humbucker Ceramic

Cutting ceramic attack. Brutal active aggression and passive punch in the same guitar. Great in both positions, or commonly paired with alnico neck.

Voice 1 (Modern Active High Output): The ideal active ceramic humbucker tone. Crisp, searing crunch, tight bass with no mud, and a growl.

Voice 2 (Modern Passive Attack): Organic, high output, passive ceramic tone. Superb distortion characteristics with Fluence dynamics and response.

Voice 3: (Single Coil): Bright, clear tone.

Fluence Modern Humbucker Pickups

- Are Multi-Voice. Set and forget, or wire-up to toggle between musically complimentary voices.

Fluence

P90 CLASSIC

Nowhere are the intrinsic benefits of Fluence Technology more up front and apparent than when applied to the P90.

Unlike stacked "humbucker" P90 variants which can aggravate certain problems while curing others, the noise, the acoustic feedback, the hum, and the inductance issues caused by guitar cables, amp, and effect inputs... with Fluence, all of it is eliminated, leaving pure, unadulterated, Multi-Voice tone.

P90 Classic Neck

Voice 1: Underwound, aged P90 clarity at the ideal volume level

Voice 2: Fat, overwound tone without losing highs

Voice 3: Clear, open single coil tone

P90 Classic Bridge

Voice 1: Vintage P90 clarity and punch at the ideal output level

Voice 2: Screaming overwound P90 leads

Voice 3: Bright, jangly single coil tone

SINGLE WIDTH

The most coveted, historical single coil tones without the hum. From vintage sweetness and clarity to muscular overwound punch, in the same guitar.

Original and totally re-imagined, Fishman Fluence pickups are free from the hum, noise and frustrating inductance issues that plague even the most coveted wire-wound pickups — revealing pure, uncorrupted and musical tone.

- Voice 1: Vintage Single-Coil** – Vintage tone, clear and present, seamlessly fused with a sweet warmth.
- Voice 2: Hot Texas Single-Coil** – Muscular, beefy, “overwound” tone without losing the highs or the single coil character we all love.

- Fluence Classic Humbucker Pickups**
- Are Multi-Voice. Set and forget, or wire-up to toggle between musically complimentary voices.
 - Are rechargeable on your guitar. Optional lithium-ion battery pack offers weeks, not hours, of playing time.

4-STRING, 5-STRING, & 6-STRING BASS SOAPBAR

The Fluence Bass Soapbar pickup brings revolutionary Fluence Multi-Voice performance, dynamic range, and articulation to 4, 5, and 6-string bassists.

Based on Fishman's convention-disrupting Fluence Core technology, a single bass pickup can now produce multiple timbres and sounds, each untethered from the other. Original and totally re-imagined, Fluence Multi-Voice pickups for electric bass are free from the hum, noise and frustrating inductance issues that plague even the most coveted wire-wound pickups, revealing pure, uncorrupted bass tone.

Like all Fluence pickups, the Bass Soapbar pickups are multi-voice and can be powered by a Fluence rechargeable battery pack or a standard 9-Volt battery.

Fluence Bass Soapbar pickups can be split for single coil operation with a single coil string window. Also, the optional Treble and Bass controls can be used to further expand the tonal palette.

Voicings for the Fluence Bass Soapbar pickup were created to offer players a wide palette of sounds that cover all playing styles.

- **Voice 1 (Passive):** Classic, fat and round
- **Voice 2 (Active):** Full frequency, full dynamics
- **Voice 2 (Active w/ mid contour):** Funk, Hi-Fi scooped
- **Single Coil Mode:** Same voices as above but with single coil string window

Fluence Bass EQ Parts Kit

Our Bass EQ Parts Kit provides even greater tonal control and versatility, including:

- Active Bass and Treble EQ bands with dual stage, independent control
- Blend control with simplified wiring
- 3-way mini toggle switch for easy voice selection

RECHARGEABLE BATTERY PACKS

Vibrato Back Plate Battery Pack

Universal Battery Pack

The Fluence rechargeable battery packs are a great way to power your Fluence-equipped instruments. The battery packs are built into a vibrato backplate or in a universal platform that will mount in any control cover.

Featuring a current capacity similar to a premium 9-Volt alkaline battery, recharging is done via a standard mini-USB cable.

LED indicators let you know when the battery pack is “full” and when it’s time to recharge. Complete recharge time from “empty” is 3 hours or less, and a full charge offers weeks, not hours, of playing time between charges (depending on load).

PHASE INVERTER

Our Phase Inverter push/pull control allows convenient access to the out-of-phase tone, and includes a hidden set-and-forget potentiometer that also allows you to preset a blended sound even with only one volume wiring!

For years, the sound of two pickups out of phase has been a staple tone for guitar players and offers a distinctive sound. For this reason, many players want it available on a switch so they engage it when desired. Because the out of phase sound is so sensitive to the pickup levels and balance, we've included a trim pot for the phase inverted pickup that's capable of lowering the volume or raising it above unity gain so that you can preset the exact sound.

REACTIVE TONE CONTROL

REACTIVE TONE CONTROL

OEM-FLU-RT1

Fluence Reactive Tone Control, Single,
Fluence

The Fluence Reactive Tone Control for powered pickups is designed to provide precise tone shaping and enhanced resonance when fully rolled off, compared to standard tone controls.

Sometimes a tone control matches perfectly with a set of pickups, whether it's getting the perfect capacitor value, pot taper, or a myriad of other factors. Our Reactive Tone Control guarantees this magic every time. There is also a difference in the way a passive coil interacts with a standard tone control versus a low impedance buffered signal. With our Reactive Tone Control, this expressive interaction is taken to the next level in a way that sweeps through many more sonic textures than just a simple treble roll off.

Backing down from full clockwise, the upper adjustment range precisely attenuates the treble frequencies while leaving the midrange intact. As the control approaches full counterclockwise, the response shifts to resonate with the main tone capacitor, creating

a dark vocal tone. This action will feel very familiar to those accustomed to tone controls of traditional passive pickups.
